[www.MATH-SALAMANDERS.COM](http://www.math-salamanders.com)

Idea #1 - Make a pattern Make a simple pattern using the coordinate grids and then write down the coordinates of your pattern. All the free 3rd Grade Math Worksheets in this section are informed by the Elementary Math Benchmarks for 3rd Grade. Not only does it help children to learn about coordinates, but there is also a lot of strategy involved too. The coordinate (-2,-4) means 2 square along (to the left) and 4 squares down. When dealing with coordinates the most important fact to remember is that the x coordinate (the horizontal coordinate) always comes first and the y coordinate (the vertical coordinate) always comes second. Using these riddles will help your child to: develop their geometry skills; develop their understanding of geometric language; apply their geometric knowledge to solve problems. Using these sheets will help your child to: know what it means for a shape to tessellate; know some common 2d shapes which tessellate, create their own tessellating patterns. You can then write a message to a friend using coordinates. These are full four-quadrant graphs. These are full four-quadrant coordinate planes, blank without axis numbering. This page includes quadrant 1 coordinate planes in various dimensions, along with layouts containing multiple blank quadrant 1 coordinate planes on a single page appropriate for completing homework problems. Using these games will help your child to learn their multiplication facts to 5x5 or 10x10, and also to develop their memory and strategic thinking skills. Using these sheets will help your child to: learn their multiplication tables up to 10 x 10; understand and use different models of multiplication; solve a range of Multiplication problems. Sheets 1 to 4 consists of 15 problems; sheets 5 and 6 consist of 20 problems. Using these sheets will help your child to: read and plot coordinates in 1, 2 or all 4 quadrants; All the free templates in this section support the Elementary Math Benchmarks. So the coordinate (4,7) means 4 squares along (to the right) and 7 squares up. More Double digit Multiplication Worksheets (harder) Take a look at some more of our worksheets similar to these. Our Multiplication worksheet generator will allow you to create your own custom worksheets to print out, complete with answers. These 2-digit multiplication worksheets have been designed for more able students who need that extra challenge! These sheets are aimed at 4th graders. Here is our collection of printable coordinate worksheets. You could swap patterns with a partner, and test each other's patterns. Multiplication Math Games How to Print or Save these sheets Need help with printing or saving? Here you will find a range of free printable coordinate charts, which will help your child learn to use and plot coordinates. Tessellations in Geometry 1 Tessellations in Geometry 2 Here you will find our free printable geometry riddles from 1st to 5th grade. For example, by convention the upper right quadrant is called quadrant 1 and contains only points that have both positive x and positive y values. These coordinate planes have labels directly along the x axis and y axis. Coordinate Plane With Labeled Axis Printable coordinate planes in inch and metric dimensions in various sizes, great for plotting equations, geometry problems or other similar math problems. There are also versions of the coordinate plane with labels on the edges instead of on each axis itself, which can sometimes make graphing equations a little easier. What are Coordinate Plane Quadrants? Because a coordinate plane is naturally divided by its x axis and y axis, it creates four rectangular regions that are called quadrants. Here you will find a selection of sheets about tessellating shapes, and you will be able to see which 2d shapes tessellate and which do not. Player 1 puts an x on their coordinate grid and writes down the coordinates of the treasure. Take a look at some more of our worksheets similar to these. Sheets 3 to 6 involve multiplying a 2-digit number by single digit numbers and finding increasing trickier products. Sheets 2 to 4 have harder 2-digit numbers to multiply and answers that are generally larger than 1000. These coordinate planes have x axis and y axis labels along the outer edge of the page. Coordinate Plane With Labeled Edges This printable coordinate plane with quadrant 1 only shown is great for introducing graphing activities in 3rd, 4th or 5th grade, or any time before negative numbers are introduced. Coordinate Plane Quadrant 1 Printable Blank Coordinate Plane Pages The collection of printable PDF coordinate planes on this page provide a number of different layouts that should fit the needs of most middle school or high school algebra classes. Sheet 1 involves 2-digit by 2-digit multiplication with smaller numbers and answers up to 1000. Here are some ideas of how to use these coordinate plane grids to help your child understand and master coordinates, while at the same time having fun and enjoying math. Each grid is available with all the numbers filled in and the axes labelled, and also in a blank form which needs to be completed. Idea #5 - Find the Treasure For this game you need 2 players, 2 separate coordinate grids, and a ruler. We have plenty of worksheets on this page to help you practice the skills of multiplying 2-digit numbers by 1 or 2 digits. Standard sizes 1/4 inch, 1/5 inch, 1/8 inch and 1/10 inch grids. Make a simple pattern in one of the quadrants and write down the coordinates. Follow these 3 easy steps to get your worksheets printed out perfectly! How to Print or Save these sheets Need help with printing or saving? You'll know where they are. Coordinate Plane Quadrant Labels Print out these blank coordinate pages with name and date blocks when you've got equations to graph for homework! The homework you turn in for geometry or algebra class will look academically astute. Blank Coordinate Plane Work Pages Printable coordinate planes in inch and metric dimensions in multiple sizes, great for scatterplots, plotting equations, geometry problems or other similar math problems. Player 2 then suggests a new coordinate and Player 1 measures and this repeats until Player 2 has found the treasure. These riddles are all about problem solving with 2d shapes. Here is our selection of free printable symmetry worksheets for 2nd and 3rd grade. Using these fun coordinate sheets is a great way to learn math in an enjoyable way. These sheets are aimed at 3rd graders. There are many different fun math activities that you can do with your child with a coordinate template, please see below for an activity sheet. There is a wide range of printable templates, including templates using 1, 2 or all 4 quadrants. Need to create your own long or short multiplication worksheets quickly and easily? Page 2 Welcome to our 2 Digit Multiplication Worksheets page. Idea #3 - Reflect It This activity will only work when dealing with 2 or 4 quadrants. All the geometry riddles in this section support elementary math benchmarks. Here you will find a range of Free Printable Multiplication Games to help kids learn their multiplication facts. There are also pre-made printable coordinate worksheets available on a separate webpage. The breakdown of the signs of coordinate points and their corresponding quadrants is shown in the table below. Quadrant Coordinate Signs I (+, +) II (-, +) III (-, -) IV (+, -) Quadrant 1 Coordinate Planes Quadrant 1 of the coordinate plane deals with positive x axis and y axis values, and it is often the first place students start graphing linear functions. The sheets are all graded in order from easiest to hardest. Sheets 1 and 2 involve multiplying 2-digit numbers by 2, 3, 4 or 5. Player 1 tells Player 2 how far away from the treasure they are. Using these sheets will help your child to: plot and write coordinates. Within each section, the sheets are carefully graded with the easiest sheets first. Here you will find a range of Multiplication Worksheets to help you become more fluent and accurate with your tables. Idea #4 - Coordinate Battleships A fun and exciting coordinate game that kids love to play. All the printable Geometry worksheets in this section support the Elementary Math Benchmarks. Player 2 suggests a coordinate and Player 1 measures the distance from Player 2's coordinate to the treasure. The coordinate planes are dimensioned in customary or metric units, just like the blank graph paper on the site. There are versions of the coordinate plane with and without axis labels, as well as versions that show the quadrant numbers in light text in the background of each quadrant. You can find full 4 quadrant coordinate planes, as well as just blank 1 quadrant coordinate planes in layouts setup for solving multiple homework problems on a single page. These printable coordinate planes have each quadrant labeled in lighter background text in the grid. This can be remembered with the saying 'Along the corridor and then up (or down) the stairs.
